

R2S Career Factsheet: Portfolio Implementer

"The world of banking and financial services is open to everyone. If you have a keen interest in current affairs and enjoy working with numbers this could be the profession for you.

You can take a variety of routes into the industry. There are two main ones: either straight from school or via university. Both have their own advantages. You can join straight from school, where you can gain knowledge from a junior position and work your way through the ranks, or you can enter the industry post-graduation once you have developed the skills required on your university course.

To work in this industry it's preferable to have a numerical background - when choosing A-levels, or other relevant qualifications, I'd advise to consider courses involving numeracy.

There is always the scope for professional development and there are a number of industry qualifications available to help you learn more and to aid career progression.

Communication, the ability to work in a team and interpersonal skills are all highly valuable in banking: these are skills that can be learnt and honed in everyday life."

David Nunes
Portfolio
Implementer
Lazard Asset
Management Ltd

Duties:

- Generate trades as directed by the Portfolio Manager
- Monitor the investment portfolio
- Understand and Utilise the in-house Portfolio Management System
- Produce reports and management information as required
- Review accounts to determine cash constraints. Monitor cash flows in and out of portfolio and work closely with PM to bring account back in line with their designated model.
- Monitor accounts to determine uniform performance between all accounts within a particular mandate
- Full and open communication with members of the operations team, outside custodians and various other co-workers in both London and other global offices to resolve open issues promptly and accurately.

Skills:
